DRY-TYPE POWER TRANSFORMERS

干式电力变压器

◆ Product Introduction 产品介绍

Due to the coils of resin-insulated dry-type transformers being encapsulated by epoxy resin, they are flame - retardant, fireproof, explosion-proof, maintenance-free, and pollution-free. They are also small in size and can be directly installed at the load center. Meanwhile, the scientific and reasonable design and casting process result in a lower partial discharge amount, low noise, and strong heat dissipation capacity of the products. Under forced air - cooling conditions, they can operate continuously at 125% of the rated load for a long time.

树脂绝缘干式变压器由于线圈被环氧树脂包封，所以难燃，防火，防爆，免维护无污染，体积小，可直接安置在负荷中心。同时科学合理的设计和浇注工艺，使产品局部放电更小，噪声低，散热能力强，在强迫风冷条件下可以在125%额定负载下长期运行。

◆ High tension winding 高压绕组

The high-voltage winding is vacuum-cast with filled epoxy resin, resulting in a small partial discharge quantity and high electrical strength of the coil. Both the inner and outer walls of the winding are reinforced with glass fiber mesh grid plates, which enhances the mechanical strength of the coil, improves the product's ability to withstand sudden short circuits, and ensures that the coil will never crack.

高压绕组用带填料环氧树脂真空浇注，局放量小，线圈电气强度高，绕组内外壁用玻璃纤维网络格板增强，增加了线圈的机械强度，提高了产品抗突发短路的能力，线圈永不开裂。

◆ Low-voltage winding 低压绕组

The low-voltage winding adopts a foil structure, which solves the problem of the axial spiral angle during wire winding, making the ampere-turns more balanced. Meanwhile, the coil is equipped with an axial cooling air duct, which enhances the heat dissipation capacity. DMD epoxy resin pre-impregnated cloth is used between the winding layers, and the whole winding is cured and formed.

低压绕组采用箔式结构，解决了用线绕时轴向螺旋角问题，使安匝更平衡同时线圈采用轴向冷却风道，增强了散热能力，绕组层间采用了DMD环氧树脂预浸布，整体固化成形。

◆ Iron core 铁芯

The iron core is made of imported high-quality cold-rolled silicon steel sheets with a three-order fully oblique joint structure. The core columns are bound with F-grade non-woven tape. The surface of the iron core is encapsulated with epoxy resin, which reduces the no-load loss, no-load current, and the noise of the iron core. The clamping pieces and fasteners have undergone special surface treatment, which further improves the appearance quality of the product.

铁芯选用进口优质冷轧硅钢片，三阶全斜接缝结构，芯柱采用F级无纬带绑扎，铁芯表面采用环氧树脂包封，降低了空载损耗，空载电流和铁芯噪声夹件和紧固件经特殊表面处理，使产品外观质量有了进一步提高。

◆ Temperature control system and cold air system 温控系统和冷风系统

A cross-flow side-blowing cooling fan is adopted. This cooling fan features low noise, high air pressure, and an attractive appearance, which enhances the overload capacity of the transformer. The temperature control system uses an intelligent temperature controller, which improves the operational reliability of the transformer.

采用横流侧吹式冷却风机，该冷却风机具有噪声小，风压高，外形美观等特点，增强了变压器的过载能力。温度控制采用智能温控仪，提高了变压器运行可靠性。

ZBW SERIES BOX-TYPE SUBSTATIONS

ZBW系列箱式变电站

◆ Product Introduction

◆ 产品介绍

- The ZBW series combined substations are compact complete power distribution devices that integrate high-voltage equipment, transformers, low-voltage equipment, etc. They are used in urban high-rise buildings, urban and rural buildings, residential communities, high-tech development zones, small and medium-sized factories, mines, oil fields, and temporary construction power consumption sites, etc., to receive and distribute electrical energy in the power distribution system.
- This product has the characteristics of strong integrity, small volume, compact structure, safe and reliable operation, convenient maintenance, and mobility. It occupies less land and greatly reduces the construction cost. In the power distribution system, it can be used in the ring network power distribution system, and can also be used in the dual-power supply or radial terminal power distribution system. It is the preferred new type of complete equipment for the construction of urban and rural substations at present.
- This product complies with the standard of GB/T17467-2010 "High-voltage/Low-voltage Prefabricated Substations" and the IEC1330 standard.

- The fully insulated structure and interlocking device ensure personal safety.
- The fully sealed structure eliminates the deterioration of oil quality and extends the service life.
- The load switch has the characteristic of three - phase linkage, which effectively reduces ferroresonance. Dual - fuse protection is adopted to ensure the simple, convenient, economical, reliable and safe operation of the system.
- There are silicon steel sheet cores, amorphous alloy cores, wound cores, etc., featuring low loss, low noise, and no body heating.
- The high - voltage incoming line uses an elbow - type cable plug, which can handle a load current of 200A. In an emergency, it can be operated as a load switch and also has the characteristics of a disconnecter.
- It is small in size, only about one - third of that of a European - style box - type substation with the same capacity.

- 全绝缘结构及连锁装置，确保人身安全；
- 全密封结构，根除油质劣化，延长使用寿命；
- 负荷开关具有三相连动特点，有效地减少了铁磁共振；采用双熔丝保护，确保系统简单、方便、经济、可靠安全运行；
- 有硅钢片铁芯、非晶合金铁芯、卷铁芯等，损耗低、噪声小、体不发热；
